### Education

Development of iOS applications. IT-Academy (2020-Oct-12 – 2021-March-15)

MSc in Economy, 2009

Belarusian State Economic University, Faculty of International Relationships

### Profile

I decided to become IOS developer because it is great to create something that you made useful or joyful for people, integrate it to their life, make it better and and see the result of your work in people's daily lives. I also keen in UI/UX design to make the app the best way for user. I have and experience working in a team, but also I am well organised and can work separately. I am open and sociable person and not afraid to take responsibility for myself.
